Contents

The 2010 Annual Meeting of the Phytopathological Society of Japan in Kyoto

Presidential Address
UYEDA, I.: What can we learn from basic plant virology? ................................................................. 117

Lectures by the Winners of the Society Fellowship
ARIE, T.: Phylogeny and phytopathogenicity mechanisms of soilborne Fusarium oxysporum ............ 121
KOIZUMI, S.: Ecological and genetic studies on durable use of blast resistance in rice ......................124
OHKI, S. T.: Studies on viral movement of Cucumber mosaic virus in infected plants......................128

Abstracts of the Research by the Winners of the Young Scientist Award
HIRATA, H.: Molecular biological studies on mechanisms involved in pathogenicity of citrus pathogens ................................................................................................................................. 132
ISHIBASHI, K.: Studies on the Tm-1 gene of tomato and host specificity of tobamoviruses..............133
SAITOH, K.: Molecular biological studies on appressorium formation in the rice blast fungus.........134

Originals
NAKAYAMA, K., WAKI, T., AOKI, T., MORISHIMA, M. and FUKUDA, T.: Pathogenicity of Fusarium solani f. sp. eumartii, the causal pathogen of foot rot of tomato, on flowers, fruits and stems of tomato plants .................................................................................................................. 135
KATO, K., HONZAWA, H., IYOZUMI, H. and NUKUI, H.: Quantitative correlation between elicitor-responsive photon emission and hydrogen peroxide induced in rice with N-acetylchitohexaose ......................................................................................................................... 142

Abstracts of the Papers Presented at the 2010 Annual Meeting in Kyoto .................................. 149

News from the Phytopathological Society of Japan ......................................................................... i
